Document type: May be distributed or printed with official announcements; **not** investment advice or a securities offering in any jurisdiction. If any figure conflicts with **BNB Smart Chain mainnet** contract state, **on-chain data prevails**.

1. One-Line Positioning

Rune Abyss is a **strategy and progression on-chain game** on **BNB Smart Chain (BSC)**: **three-hero expedition teams**, **on-chain dungeon settlement**, and **verifiable randomness** as trust anchors, forming a closed-loop economy with **no protocol-inflated materials** and **ongoing utility-token burns**.

2. Narrative Spine (Premium Messaging)

As on-chain games move from hype to **readable rules and verifiable assets**, Rune Abyss takes a more restrained, harder-to-copy path: **fun in the gameplay, rules in the contract**.

- **Expedition, not gambling:** dungeon power gates, stamina, and drops are constrained by on-chain logic; outcomes and yields are reconcilable.
- **Synthesis, not a loot-box void:** when formulas are met, **100% on-chain success**; materials and \$ADVENT burn per rules, minting higher-tier character NFTs—clear progression, manageable expectations.
- **Market, not a black box:** materials trade in a **USDT internal market** with limit orders and partial fills; fee structure and referral rules are published.
- **Fairness, not slogans:** summoning and synthesis use **Commit-Reveal** to reduce single-point randomness manipulation and move toward **verifiable fairness**.

This is not a promise of windfalls; it is a long-term stance on **rule transparency** and **asset clarity**.

3. External Bullets (Ready to Use)

1. **Real on-chain assets:** character NFTs + ERC1155 materials; core logic on-chain; wallet as account.
2. **No protocol-inflated materials:** AE / BF / MR / ES come from dungeons or player trading; **the protocol does not mint materials out of thin air**.
3. **\$ADVENT as utility:** summoning and synthesis burns; supply designed around **1 billion** (follow contract `totalSupply`); fair-launch channels per official notices (e.g. third-party platforms).
4. **Summon scarcity:** global token-summoned characters cap **~6,000**; **synthesis mints do not count** toward that cap; higher tiers flow through synthesis and the market.
5. **Internal-market liquidity:** USDT-denominated materials, partial fills, transparent fees and referral splits.

6. **Product experience:** responsive web for desktop and mobile; in-app “**Rune Sister**” AI for gameplay help (application layer only; not investment advice).
