BSC MAINNET · CHAIN ID 56

Rune Abyss • White Paper (Public Release)

Document type: Public-facing product and economy overview; may be distributed or printed alongside official announcements.

Not a securities prospectus; not investment advice, yield promise, or deposit solicitation in any jurisdiction.

Data precedence: Parameters here reflect product design and public communication; **if any value differs from live reads on deployed BNB Smart Chain mainnet contracts, on-chain data prevails.**

Official channels: Website <https://runeas.xyz/> · X <https://x.com/RuneAbyssAI>

Abstract

Rune Abyss is a Web3 strategy and progression game on **BNB Smart Chain (BSC, mainnet chain ID 56)**. Players spend **\$ADVENT** to summon **character NFTs**, form **teams of three**, consume stamina to clear **six dungeon tiers**, and earn four materials **AE, BF, MR, ES**; materials trade in a **USDT-denominated internal market**; when on-chain conditions are met, players **deterministically synthesize** higher-rarity characters by burning materials and **\$ADVENT**. Materials are not infinitely minted by the protocol; summoning and synthesis use **Commit–Reveal** to improve verifiable randomness.

1. Project Positioning

Field	Description
Chinese name	符文深渊
English name	Rune Abyss
Chain	BNB Smart Chain mainnet
Genre	Strategy / progression · on-chain dungeons · material economy · NFT synthesis
Core loop	Team up → Dungeons → Materials → (optional) internal market → Synthesize → Repeat

2. Vision and Principles

Common concerns about on-chain games include opaque rules, hard-to-verify assets, and unsustainable economies. Rune Abyss adopts **“the contract is the rulebook”** : core gameplay and key economic constraints are enforced by **auditable smart contracts** where possible; materials are **not infinitely minted by the protocol**; **utility token burns** and a **material loop** form an economy that can be discussed and reconciled against chain data.

3. System Overview (External)

Component	Description
Official frontend	Browser-based; connects wallet and interacts with contracts; provides UI and state (subject to official deployment).
Character NFTs	On-chain NFTs; obtained via \$ADVENT summoning or material synthesis; rarity and power bands apply.
Materials (ERC1155)	Fungible-per-id token standard; primarily from dungeons; tradable on the market.
Game logic contracts	Team formation, dungeon resolution, summoning, synthesis (including Commit–Reveal flows).
Market contract	USDT-priced orders; partial fills supported; fees and referral splits per contract rules.
Stamina & payments	Challenges consume stamina; USDT purchases stamina per contract rules.
Referrals	Players may self-bind; unbound fee routing follows contract and project configuration (on-chain prevails).

4. Gameplay and Economic Parameters

The tables below are **public design references** for readers; **live values, fee ratios, block delays, etc., follow mainnet contracts and the official frontend.**

4.1 Rarity, Power Band, and Summon Probability (Design)

Tier	Name (EN)	Power band	Design probability
1	Apprentice	15–25	65%
2	Adept	30–50	22%
3	Elite	60–100	9%
4	Hero	100–150	3%
5	Legendary	150–199	1%

4.2 Teams and Dungeons (Summary)

- Each team requires **3** distinct characters.
- Up to **8** teams per account.
- ~24 hours** cooldown per team after a challenge (on-chain prevails).
- Each dungeon run costs **1** stamina.
- Stamina may be bought with **USDT**; a common display price is **~0.5 USDT per point**; newcomers may receive starter stamina (per deployment and campaigns).

- **Success** typically yields **full** materials; **failure** often yields **~one quarter** of materials (implementation prevails).

4.3 Dungeon Tier, Power Gate, and Material Output (Design)

Tier	Min power	AE	BF	MR	ES
1	≥45	38	19	0	0
2	≥90	31	24	0	0
3	≥180	33	51	48	14
4	≥300	15	30	58	29
5	≥450	17	22	82	38
6	≥550	23	16	68	65

4.4 Summoning and Scarcity

- Base summon cost: **50,000 \$ADVENT per character** (order of magnitude; follow on-chain e.g. `currentDrawPrice`).
- After roughly every **1,000** globally minted summon characters, price increases **~10%**.
- Batch size **1–10** per summon action.
- Global **token-summoned** characters cap at **~6,000**; **synthesis-created characters do not count toward this summon cap**.

4.5 Synthesis Costs (Design)

When on-chain conditions are met, **100% success**; materials and \$ADVENT are burned per rules.

Target rarity	AE	BF	MR	ES	\$ADVENT (burned)
Apprentice	380	290	140	25	150
Adept	850	650	340	90	450
Elite	1780	1350	780	230	1125
Hero	3780	2850	1620	580	2250
Legendary	7950	5920	3350	1300	4500

4.6 Market and Referrals (Summary)

- **USDT** pricing; **partial fills** supported; common **5%** market fee (on-chain prevails).
- Fees and stamina spend may split **direct / indirect** referral shares; **without a bound referral**, routing follows contract and project configuration.
- Referral binding is typically **optional and self-serve**; rules on-chain prevail.

4.7 \$ADVENT and USDT

- **\$ADVENT**: utility token for summoning and synthesis burns; total supply designed around **1 billion** (follow token `totalSupply` and official disclosures). Acquisition and circulation follow **official announcements** (may include third-party fair-launch venues; verify domain and contract yourself).
- **USDT**: common BSC stablecoin for stamina and material market; wallet approvals are user-managed.

5. Fairness and Security

- **Commit–Reveal**: reduces manipulable randomness within a single block in summoning/synthesis; reveal delays and cancel rules are contract-defined.
- **Verification**: use a **block explorer** to check deployed addresses, transactions, and events.
- **Phishing & approvals**: use **HTTPS official domain** only; beware unknown links and excessive allowances; on-chain actions are **irreversible**.

6. Application Layer: AI Assistant (“符文妹妹 / Rune Sister”)

The official frontend may offer an **AI chat assistant** for **how-to, navigation, and concept explanations**—an **application-layer** feature **independent** of custody, approvals, and settlement. Model output may be wrong or outdated; **balances, allowances, gas, and tx outcomes follow wallet prompts and chain data**. Not financial or investment advice.

7. Roadmap (Disclosure Placeholder)

Phases are updated via **website / social**; this table is structural only.

Phase	Direction
Current	Mainnet core gameplay and official frontend
Near term	Events, partnerships, security and compliance disclosures (per announcements)
Later	Ecosystem and product iterations (per announcements)

8. Disclaimer

1. This document is for **information and product understanding only**; not a securities offering, fund raise, deposit, or principal guarantee.
2. **Crypto assets and NFTs are volatile**; you may lose all capital; decide according to your risk tolerance.
3. Regulations vary by region; **comply with local laws** and seek professional advice.
4. Content may be updated; **all parameters follow live contracts and latest official notices**.

5. Official information: <https://runeas.xyz/> and <https://x.com/RuneAbyssAI>; beware impersonation and phishing.

9. Official Information and Verification

- **Website:** <https://runeas.xyz/> (verify HTTPS and hostname).
 - **X:** <https://x.com/RuneAbyssAI> (@RuneAbyssAI).
 - **On-chain:** use [BscScan](#) or similar; **contract addresses per official site/social for the period.**
